Innovative Technology

As an innovator in the renewable energy industry, Brunstock Electric represents environmentally friendly power system technologies. Led by a team of global power grid experts, Brunstock brings new technology solutions to the world's energy systems.

At the centre of Brunstock's range are its innovative SF6-free substation products. When combined with the speedy delivery models of our distributors, Brunstock products will help the world meet some of the challenges in the global energy transition.

The step-up transformer station converts low-voltage AC power generated by the BESS PCS or PV inverters into medium-voltage AC power and feeds it into the power grid.

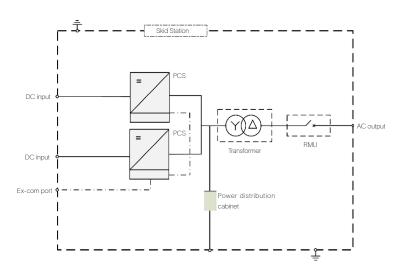

Brunstock's step-up transformer stations integrate the ring main unit, transformer, PCS or low voltage CB panel, and auxiliary power supply and communication device into a steel-structure, such as a container or skid, to provide a highly integrated power transformation and conversion solution for medium-voltage grid-tied applications. This integrated station solution enables fast delivery, easy installation and robust project scheduling.

Application in BESS Projects

Our step-up transformer skid station can be used in grid-tied systems in large BESS projects. It is an integration of a medium voltage RMU, transformer, PCS (central or string type) and other auxiliary systems. Its plug-and-play design makes project delivery fast, cost efficient and reliable.

- 1. More detailed AC power, please refer to the de-rating curve.
- 2. Rated output voltage from 20 kV to 36 kV, more available upon request
- 3. Extra expense needed for optional features which standard product doesn't contain, more options upon request.
- 4. When ambient temperature ≥55°C, an extension roof must be equipped for the substation on site by the Brunstock distributor or end-user.
- 5. For higher operating altitude, please consult with Brunstock.

Application in PV Plant Project

The step-up transformer station applies to the grid-tied systems in large PV plants. It is an integration of medium voltage RMU, transformer, low voltage power distribution panel and other auxiliary system, its plug-and-play design makes project delivery fast, cost efficient and reliable.
